Retraction Note: Severe Viperidae envenomation complicated by a state of shock, acute kidney injury, and gangrene presenting late at the emergency department: a case report

Agnès Esiéné\textsuperscript{1,2}, Paul Owono Etoundi\textsuperscript{1,2}, Joel Noutakdie Tochie\textsuperscript{1*}, Arlette Junette Mbengono Metogo\textsuperscript{1} and Jacqueline Ze Minkande\textsuperscript{1,3}

The authors have retracted this case report [1] because the head of the snake shown in Figure 1 and described as being that of a viper (\textit{Echis occellatus}) is identical to the head of a snake shown in Figure 1 of a different case report [2] where it was identified as being \textit{Naja melanoleuca}, a member of the \textit{Elapidae} family. The authors do not have records of the manufacturer and batch numbers of the 3 vials of anti-venom serum administered to the patient in [1]. All authors agree with this retraction.
